EDUCATION

University of Maryland - College Park
B.S. Computer Science, Entrepreneurship Minor

Aug 2021 – May 2025
3.78 GPA

WORK EXPERIENCE

JPMorganChase
Software Engineer

July 2025 – Present
Dallas, TX

- Spearheaded the development of AI tooling for MDS, the firm's React UI library used across 200+ Chase products.
- Sole owner of the data pipeline powering MDS Agent Skills, a tool that gives LLMs the context to code with MDS.
- Automated the extraction of 6 sources/component across 60 components, updating Agent Skills data every release.
- Became the primary maintainer of the CI/CD pipeline, handling >90% of package upgrades and proxy migrations.
- Shipped 6+ MDS components in React and TypeScript, delivering each with documentation and usage examples.
- Nominated by a VP for accelerated promotion within my first year at the firm.

Prept.ai
Founder

Dec 2023 – May 2025
College Park, MD

- Launched an AI-native interview preparation platform that delivered instant, personalized feedback for job seekers.
- Fine-tuned a GPT-3.5-turbo model to grade recorded interview responses on a 1-5 scale across a set of 6 metrics.
- Curated a training set by crowdsourcing 1,000+ interview responses and hand-assigning a score for each metric.
- Developed a React frontend: in-browser video capture, interview flows, result modals, and progress dashboards.
- Built an Express backend that transcribed audio to text, ran model inference, and returned structured feedback.
- Conducted PMF discovery during user interviews, identifying key friction points that guided product iteration.
- Secured grant funding through the University of Maryland Dingman Center for Entrepreneurship.

JPMorganChase
Summer Software Engineer

May 2024 – Aug 2024
Wilmington, DE

- Drove a 20% reduction in compute for a platform that predicted customer call intent to power JPMC's IVR system.
- Designed and developed Python ETL workflows for 2 batch jobs, each capable of extracting 1M+ relevant daily records, running model inference, and loading prediction outputs to the data lake for downstream consumption.
- Pioneered model observability adoption within the team's MLOps ecosystem by integrating Arthur AI.

PROJECTS

The Better Threads Project

[View Project](#)

- Built a transformer classifier by following Sebastian Raschka's *Build a Large Language Model*, implementing attention and positional embeddings line by line in Python, then repurposed the model for cyberbullying detection.
- Consolidated multiple Kaggle datasets into a 568k-example corpus (2:1 non-cyberbullying to cyberbullying split).
- Rented an A100 via RunPod to train the classifier, achieving 92.81% accuracy and 88.08% F1 on held-out data.

GptGO Chrome Extension

[View Extension](#)

- Shipped and grew GptGO, a Chrome extension that brought ChatGPT to any webpage, to **40k+ users** (lifetime).
- Analyzed competing extensions on the marketplace to determine where they fell short, then built to fill those gaps.
- Implemented an exit poll on uninstall, collecting 1800+ responses that surfaced churn drivers and drove fixes.
- Earned organic reach by riding trending sounds, resulting in 4.75M+ impressions on TikTok with zero ad spend.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, Go, C++

Frameworks & Libraries: React, Next.js, Node.js, Express, FastAPI, Tailwind CSS, Expo

AI/ML: Hugging Face, OpenAI API, Whisper, MCP, model fine-tuning, Scikit-learn, Pandas, NumPy

Developer Tools: Git, Jenkins, Claude Code, Playwright, Puppeteer, NX, Jira

Databases: MongoDB, Firestore, DynamoDB, MySQL, Supabase

Cloud & Infrastructure: AWS (EMR, S3), RunPod, Spark
